Electric Arc Exposure Tests

For Paulson Manufacturing Corporation

Faceshield

Faceshield ARC-S2K1-PC-12

Paulson Polycarbonate Lens with CB2-HD Mounting Bracket, Part Number 9004860

Model, Part Number, Style: 2180306

Lens color: Green

Thickness: 0.060 inch, 1.5 mm

Report Number: 1208F09, Revision: 00

September 19, 2012

Tests Conducted at Kinectrics High Current Laboratory
Toronto, Ontario, Canada

Electric Arc Exposure Report

ASTM F2178-08 Standard Test Method for Determining the Arc Rating and Standard Specification for Eye or Face Protective Products

General

At the request of Roy Paulson electric arc exposure tests were conducted on faceshields for Paulson Manufacturing Corporation. Roy Paulson arranged with ArcWear.com to facilitate testing by the High Current Laboratory of Kinectrics in Toronto and to review test data.

The tests documented in this report were conducted on September 19, 2012 in accordance with:

 ASTM F2178-08 Standard Test Method for Determining the Arc Rating and Standard Specification for Face Protective Products

Test Samples

Faceshields test samples (were) received on August 14, 2012.

Samples were tested as received. No washing or any other preparation is required by the standard.

Test Results

The test program includes minimum of ten two-mannequin arc trials. The test data set is evaluated using logistic regression method.

Following test data was recorded for each trial:

- arc exposure electrical conditions: arc trial number, RMS arc current, peak arc current, arc voltage, arc duration, energy dissipated in arc, plots of arc current and arc voltage
- temperature rise response from two monitor and four face sensors for each instrumented mannequin head in each trial, plot of Incident energy distribution Ei from bare shot analysis
- photographs of exposed material panels
- video

Above mentioned test data is part of report and is available for download from <u>ArcWearOnline.com</u> arc testing website. Test data is accessible only to and protected with Paulson Manufacturing Corporation unique password.

Essential test data and test results are presented in the table below and on the attached data pages as follows:

- arc rating ATPV or EBT or both and plots of the burn injury probability (ATPV) or breakopen probability (EBT) or both versus Ei
- test specimen description and order of layers for fabric system and faceshield

- distance from an arc center line to the panel surface
- subjective evaluation
- heat attenuation factor (HAF) and plot of HAF on Ei
- ignition probability value (if determined during testing)

Rating

Faceshield system specified in the Table 1 below received final arc rating as:

$ATPV = 17 cal/cm^2$

Test item description

Paulson Mfg Corp, Faceshield ARC-S2K1-PC-12, Style 2180306, Green, Polycarbonate, Thickness: .06 in, Mounting Bracket: Paulson, CB2-HD, Part Number 9004860, Hardhat: MSA, Style V-Gard, ArcWear# 1208F08

Reference Standard

ASTM F2178-08

Standard Test Method for Determining the Arc Rating and Standard Specification for Eye and Face Protective Products

<u>Test Parameters:</u> Test current: 8 kA Number of samples analysed: 22

Distance to Fabric: 30 cm

Arc Gap: 30 cm Incident Energy Range: 5 to 28 cal/cm²

Arc Rating, ATPV = 17 Cal/cm² Heat Attenuation Factor, HAF = 87%

Summary

The Arc Rating of this material is intended for use as part of a flame resistant garment for workers exposed to electric arcs. The material was tested by Kinectrics as received. The test result is applicable only to the Test Item, other material or color may have different protection level. Actual performance of the complete garment may vary depending on the final design and assembly of the garment. The Arc Rating was calculated based on the data obtained and analysed in accordance with the latest version of the applicable standards. The individual test sheets, graphs, photographs of the samples and video of every test are provided in digital format to the Client for review.

As of August 1, 2010, the arc testing performed to the above mentioned Standard is accredited by the Standards Council of Canada to conform to the requirments of CAN-P-4E (ISO/IEC 17025:2005) by QMI, a division of SAI Global and North America's leading QMS registrar. Adherence to this standard provides one of the strongest assurances of service quality available. As a minimum, since July 1998 all work at Kinectrics is performed to meet the requirements of ISO 9001.

Kinectrics Inc takes reasonable steps to ensure that all work performed shall meet the industry standards as set out in Kinectrics Inc.'s Quality Manual, and that all reports shall be reasonably free of errors, inaccuracies or omissions. KINECTRICS INC. DOES NOT MAKE ANY WARRANTY OR REPRESENTATION WHATSOEVER, EXPRESS OR IMPLIED, WITH RESPECT TO THE MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE OF ANY INFORMATION CONTAINED IN THIS REPORT OR THE RESPECTIVE WORKS OR SERVICES SUPPLIED OR PERFORMED BY KINECTRICS INC. Kinectrics Inc. does not accept any liability for any damages, either directly, consequentially or otherwise resulting from the use of this report.

Note

- The test performed does not apply to electrical contact or electrical shock hazard.
- An unsigned copy of this report is an unofficial reporting of information. Report must be signed to validate test data and comform to quality standards.
